

Day 3 Challenges

1. Challenge: Online Status Checker

Create a Swift program to determine a user's online status. The status is "Online" if the user is active or idle but not if they are offline or in do-not-disturb mode. Use logical operators in an if-else statement for this task.

2. Login System:

Create a simple login system using conditionals. If the username is "admin" and the password is "password123", print "Access granted." Otherwise, print "Access denied."
